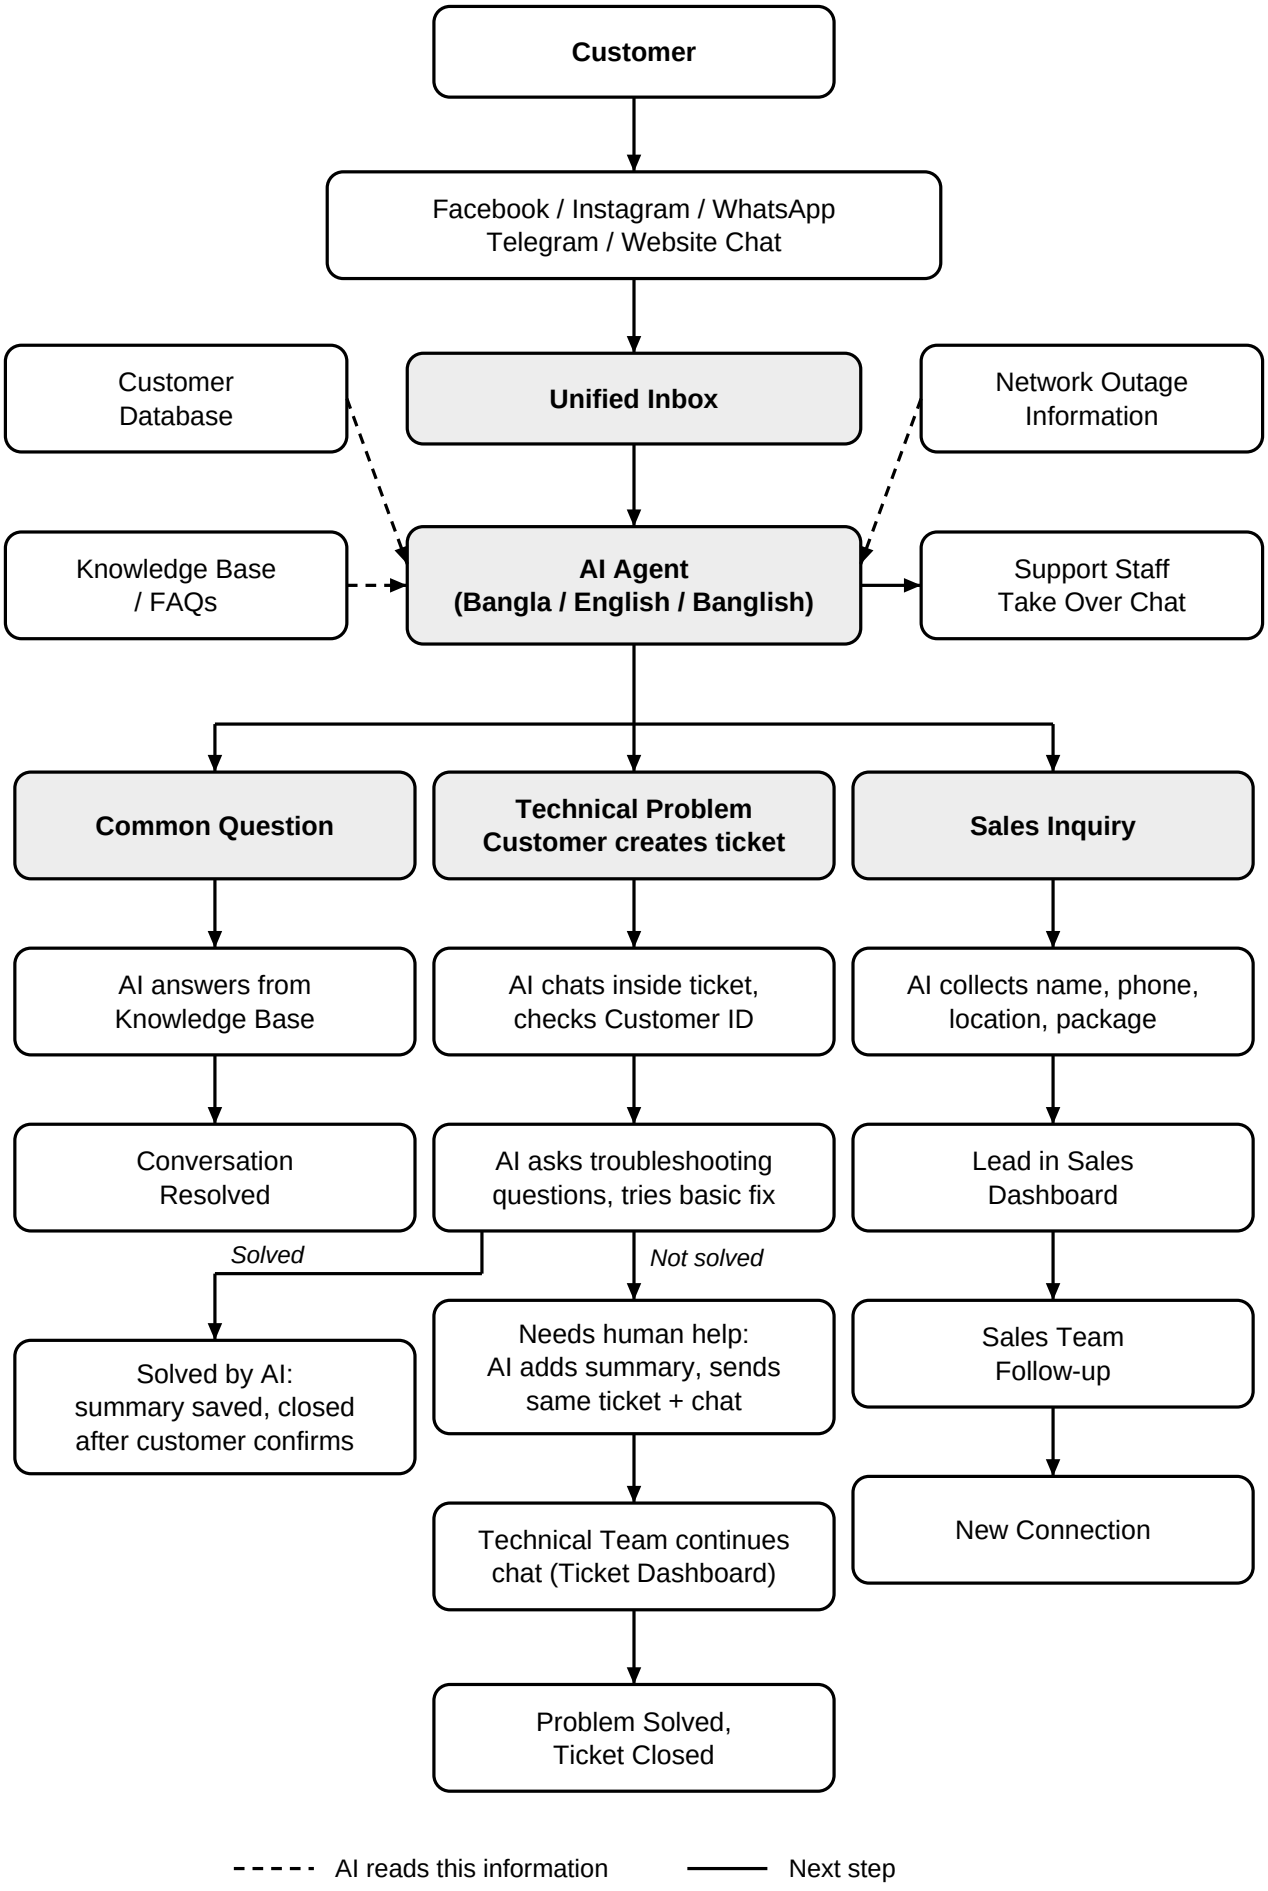
SpaceNet AI CRM Demo: Feature List

1. All social media messages in one inbox: Facebook Messenger, Instagram, WhatsApp, Telegram and website chat.
2. Facebook and Instagram post comments will also show in the inbox.
3. AI will automatically answer common customer questions.
4. AI will reply in Bangla, English and Banglish.
5. AI will reply to public comments and invite the customer to continue in private message.
6. AI will transfer technical problems and difficult questions to the right support team.
7. Staff can take over any chat and see all previous messages.
8. Staff can hand the chat back to AI when they are done.
9. AI will suggest replies that staff can send with one click.
10. AI will notice angry or frustrated customers and send them to a human quickly.
11. AI will understand customer voice messages.
12. Staff can write private notes inside a chat for their team.
13. Customers will create a support ticket first.
14. AI will chat inside the ticket and ask simple questions to understand the problem.
15. AI will ask for the customer ID and check it against customer records.

    Sub feature of 15: If the customer forgets the ID, AI can find it using the registered phone number.
16. AI will try basic troubleshooting steps with the customer inside the ticket.
17. If AI solves the problem, it will save a summary and close the ticket after the customer confirms.
18. AI will choose the ticket type, such as no internet, slow internet, router problem or billing.
19. AI will set ticket priority as normal, high or urgent.
20. If human help is needed, AI will add a summary and send the same ticket and full chat to the right technical team.
21. Customers will get a ticket number and see all updates inside the same ticket.
22. Customers can ask AI for the latest status of their ticket.
23. Staff will get a warning if a customer opens a second ticket for the same open problem.
24. Technical teams can see assigned tickets in one dashboard and continue the same chat with the customer.
25. Late or overdue tickets will be marked with an alert.
26. Customers can reopen a ticket if the problem comes back.
27. AI will ask customers to rate the service after a ticket is closed.
28. AI will find people interested in new internet connections from messages and comments.
29. AI will collect name, phone number, location and the required internet service.

    Sub feature of 29: AI will ask if the connection is for home or office.
30. AI will check if SpaceNet service is available in the customer's area.
31. AI will suggest a suitable internet package.
32. AI will create the lead automatically.

33. Leads will be assigned to the sales team automatically.
    Sub feature of 33: Corporate inquiries will go to the corporate sales team.
34. Sales teams can see all potential customers in one dashboard.
35. Sales staff can update lead status: new, contacted, interested, connected or lost.
36. Sales staff will get follow-up reminders.
37. AI can book a site survey or new connection setup for interested customers.
38. Each customer will have a profile with customer ID, package, connection status and area.
39. The customer profile will show all previous chats, tickets and complaints.
40. One customer can have more than one connection under the same profile.
41. AI will guide customers through no internet, slow internet and Wi-Fi problems.
42. AI will explain what router and ONU lights mean and what to do next.
43. AI will check if the account is active or expired and if the connection is online or offline.
44. AI will share a speed test link and ask the customer for the result.
45. Staff can mark a network outage for an area.
46. An outage dashboard will show affected areas and the number of complaints.
47. AI will tell customers in affected areas about the known outage.
48. Complaints from the same area will be linked to one outage.
49. Many complaints from one area in a short time will alert the network team (NOC).
50. Affected customers will get a message when the outage starts and when service is back.
51. Staff can send planned maintenance notices to customers.
52. Customers can ask AI about their bill amount, due date and payment status.
53. AI will send payment reminders before the due date.
54. AI will share an online payment link (bKash, Nagad or card) and confirm when the connection is active again.
55. Customers can request a package upgrade or downgrade through chat.
56. Customers can request line shifting to a new address through chat.
57. Technicians will see their installation and repair tasks in one list.
58. Staff can schedule technician visits, and customers will get the visit time.
59. Technicians can update job status: on the way, working or completed.
60. Main dashboard will show total chats, AI-handled chats, human-handled chats, open tickets and new leads.
61. Managers can see ticket response time, resolution time, team performance and lead conversion.
62. Managers can see area-wise complaint reports and customer ratings.
63. Admin can set roles and permissions for support, technical, sales and technician staff.
64. Admin can add and edit the FAQs, packages and prices that AI uses.
65. Admin can set working hours, and AI will handle chats after office hours.
66. Admin can turn AI on or off for any channel or chat.
67. The demo will use sample customers, tickets, leads, bills and outage data.


How the CRM Works
